■ THURS., SEPT. 25, 2025 NOON–1PM **CHANGES IN MASONRY CODES & STANDARDS: HOW THEY AFFECT SPECIFICATIONS** (1 AIA/CES LU HSW | 0.1 ICC CEU)

By Nick Lang - *VP Engineering & Advocacy, Masonry - CMHA*

Over the past ten years (or more) there have been significant updates to the codes and standards that govern concrete masonry materials, design, and construction. These changes lead to more efficient and cost-effective design. Hear about these changes and how you may need to update your project specifications to take advantage.

■ THURS., NOV. 6, 2025 NOON–1PM **DELEGATED DESIGN OF MASONRY – A PARADIGM SHIFT** (1 AIA/CES LU | 0.1 ICC CEU)

By Jamie L. Davis, PE, LEED AP - *Principal Ryan Biggs Clark Davis*

This presentation explores the possibilities of pushing masonry to a delegated design workflow, similar to cold-formed and precast. For years the masonry industry has been plagued by lack of education and experience in the proper design of masonry systems. Other industries, such as cold-formed framing, deal with the same issues, however, they have adopted a delegated design workflow where the bulk of the in-depth design is performed during construction phase by designers that are highly experienced. This presentation will explore how this workflow could be used for masonry and initiatives that are underway to promote this paradigm shift in the industry.

■ THURS., DEC. 4, 2025 NOON–1PM **BUILDING DESIGN CONSIDERATIONS TO HELP MITIGATE ACTIVE SHOOTER INCIDENTS**

(1 AIA/CES LU HSW | 0.1 ICC CEU)

By Walter G. M. Schneider III, Ph.D., P.E., CBO, MCP, CFO, MiFireE, FASCE

As society changes, the built environment must adapt. Where in the past the primary safety consideration in a building was fire protection, now we need to consider the real possibility of an active shooter. In many ways the efforts of mitigating one threat go counter to mitigation of the other threat. This program will present some possible design solutions to minimize the active shooter threat while not compromising the fire safety of the building.
